Key points

- Compound interest means earning returns on your earlier returns. 1
- The longer money stays invested, the faster it grows. 1
- An index fund gives you a small slice of many companies, usually with low fees. 2
- Build an emergency fund before you invest. 3

Quiz me on this

Investing basics quiz

Question 3 of 5

What does an index fund do?

A Picks a few stocks it expects to beat the market — ✕ Not quite · your answer

B Follows a market index by holding the companies in it — ✓ Correct answer

C Guarantees a fixed return every year

D Lends your money to companies for a set interest rate

Why B is right

An index fund copies a market index, so it holds the companies in that index instead of trying to pick winners. Picking stocks to beat the market is what an actively managed fund tries to do.

How compound interest builds on itself 1

Real investments don't earn a fixed 5%. The round number keeps the idea easy to see.

Growth on growth

When your returns start earning returns of their own, growth speeds up the longer you leave the money alone. That is compound interest. 1

Index funds

An index fund fo Index funds explained · 3:42 one purchase gives you a small slice of many companies at once. 2 It doesn't try to pick winners, which usually keeps its fees low. 2

Start with a safety net

Build your emergency fund before you invest, so you won't need to sell when something unexpected happens. 3
